████████ -
Are you available on Monday at 12 noon to re-review this with our PWG/ Legal?

Thanks!

Just to make sure I understand -- today, regardless of ████████████ any app
(system or 3P) can████████████████████████████████████
████████████ Is that correct?

However, you mentioned that getting the results of that scan is based on app permissions - what
permissions? app-level location permission?

Thanks!
Jen

Just following up on these two states:

Location ON, Wifi Scanning ON, Wifi OFF: Only system apps can request wifi scans?

i believe scan requests will be honored - need to confirm

Location OFF, Wifi Scanning ON, Wifi OFF: Only system apps can request wifi scans; however, location doesn't request any wifi scans

no scans will be done - need to confirm

Can you confirm whether scanning is available to no one, only system apps, or 3P apps?

Thank you!
Jen

I think it would help just to understand what happens today in the 2^3 options for location toggle, scanning toggle, and connectivity toggle:

(system apps and 3p apps are pretty much equivalent. there is a path for scan requests that location uses, but that is not available in general (requires the permission: `android.Manifest.permission.LOCATION_HARDWARE`)

Location ON, Wifi Scanning ON, Wifi ON: System apps and 3P apps can request wifi scans

yep

Location ON, Wifi Scanning ON, Wifi OFF: Only system apps can request wifi scans?

i believe scan requests will be honored - need to confirm

Location ON, Wifi Scanning OFF, Wifi ON: Since wifi is on, System apps and 3P apps can request wifi scans

yep

Location ON, Wifi Scanning OFF, Wifi OFF: No wifi scans by anyone

correct

Location OFF, Wifi Scanning ON, Wifi ON: System apps and 3P apps can request wifi scans, location doesn't request any wifi scans

correct - but only bc wifi is on

Location OFF, Wifi Scanning ON, Wifi OFF: Only system apps can request wifi scans; however, location doesn't request any wifi scans

no scans will be done - need to confirm

Location OFF, Wifi Scanning OFF, Wifi ON: Since wifi is on, System apps and 3P apps can request wifi scans, location doesn't request any wifi scans

correct

Location OFF, Wifi Scanning OFF, Wifi OFF: No wifi scans by anyone
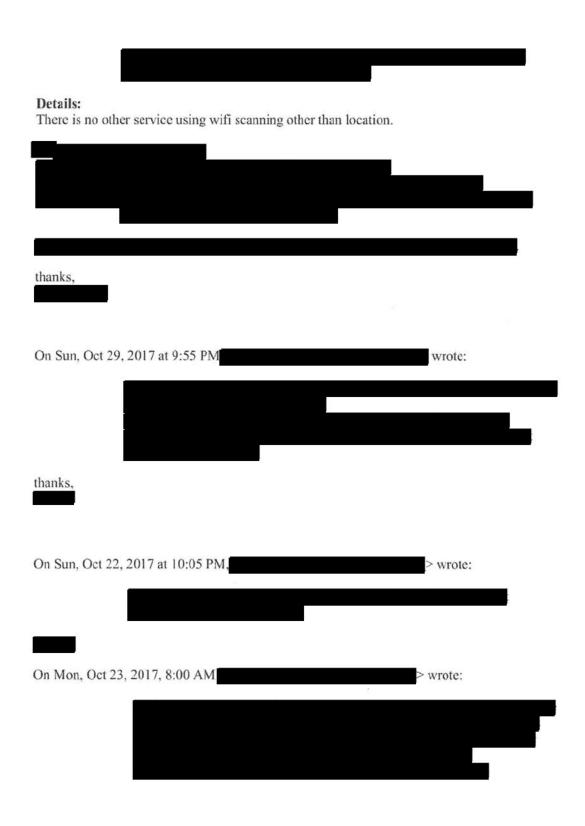

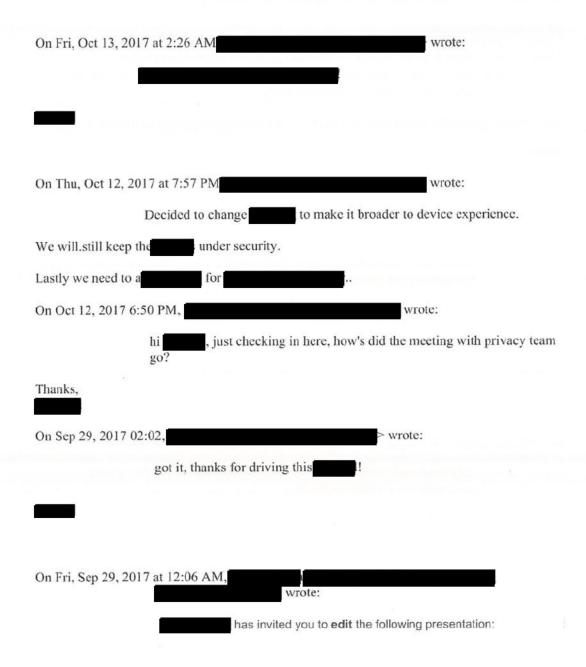

correct

Took a stab at what happens, but likely wrong...

What happens if the toggle is OFF but WiFi for connectivity/networking purposes
is enabled? From the thread, I assume that 3rd-party wifi scanning would be
disabled. That's understood but not explicitly stated below.

Thanks ████

████████ - can you please confirm what ██████ is stating below?

From our previous thread, my understanding of how it works today is if Device Location is
OFF, but Wifi Scanning (under Location Settings) is ON, then although Location
doesn't request any wifi scans, other system apps CAN get wifi scans (and
possibly 3P apps that target SDK 22 and below).

Thanks,
Jen
