Subject: OVERDUE LAUNCH - Please update: [Launch ████ N20: Enable device-level UDC settings from account-level state change
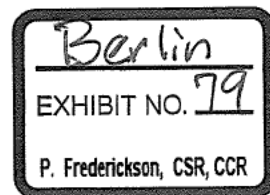

Cc: ████████████████

REMINDER - Launch date overdue.
Please modify launch status or update launch date!

Your role as davidmonsees: Owner (Creator, PM, TL)

Link: ████████████████████████

Launch information:

Launch ID	████████
Name	**N20: Enable device-level UDC settings from account-level state change**
Calendars	App and Product Infrastructure: ████
Launch Date	**2017-01-31**
Status	**Current**
Description	SUMMARY: The sWAA and DI UDC settings have both account-level consent and device-level upload settings; this launch focuses on the device-level. Today, the device level upload setting is a) off by default, and b) is not turned on when the account-level consent is turned on. This launch update the sWAA and DI device-level settings to behave similar to the Location History/Reporting setting: turning on the account-level setting will also turn on the device level setting. Note that no data is saved if the user has not consented to sWAA/DI. ████████████████████████████████ UPDATE: Notifications are no longer part of this. This launch is a UDC setting change in Android. ████████████████████████████████
