**TABLE OF CONTENTS**

1 TABLE OF AUTHORITIES .....iv  
2 I. INTRODUCTION ..... 1  
3 II. GOOGLE’S MOTION FAILS GIVEN THE FULL ISSUES IN THIS CASE ..... 1  
4 III. FACTUAL BACKGROUND..... 2  
5 A. Google is an advertising business that monetizes its users’ location information... 2  
6 1. Location has tremendous value to Google. .... 2  
7 2. Google uses deceptive and unfair practices to collect location data. .... 4  
8 B. Google is involved in various types of sales and advertising of merchandise..... 5  
9 1. Google engages in ongoing sales of its services in exchange for a user’s  
10 data..... 6  
11 2. Google sells and advertises Android devices and pre-loaded software. .... 6  
12 3. Google sells “transactions” between users and advertisers, which also  
13 involve the advertisement of merchandise. .... 7  
14 C. How Google deceives users. .... 8  
15 1. Google omits accurate information about location tracking in its  
16 advertisements. .... 8  
17 2. Google affirmatively deceives users about its Location History settings. .... 8  
18 3. Google deceives users by not explaining WAA’s relationship to location. .... 9  
19 4. Google deceptively and unfairly exploits “coarsened” location data..... 9  
20 5. Google deceptively and unfairly collects location data through runtime  
21 settings. .... 10  
22 6. Google’s omissions constitute a deceitful “practice” under the CFA. .... 10  
23 IV. LEGAL ARGUMENT..... 10  
24 A. Google engages in multiple types of sales and advertisements of merchandise.... 11  
25 1. The CFA makes clear a “sale” is “for any consideration,” not just  
26 money. .... 11  
27 2. Google’s provision of products and services are “sales” under the CFA. .... 12  
28 a. Google exchanging its services for user data constitutes a “sale.” ..... 12  
b. The sale of Android devices for money is a “sale” under the CFA..... 13  
c. Google’s sale of transactions is a sale under the CFA..... 13  
3. The ads Google shows users are “advertisements” under the CFA. .... 13  
B. The CFA covers Google’s deceptive and unfair acts, practices, and omissions.... 14  
1. Under the CFA, “in connection with” means “related to.” ..... 14

1 **I. INTRODUCTION**

2 The issue before the Court is whether Google’s deceptive and unfair acts and practices are  
3 “in connection with” the sale or advertisement of merchandise under the Arizona Consumer Fraud  
4 Act (“CFA”). The CFA’s language covers Google’s deceptions, and the facts show that Google’s  
5 conduct is “in connection with” the sale and advertisement of merchandise, including selling  
6 hardware and software to consumers. *See* p. 14-29 *infra*. To hold that *no sale occurs* when a user  
7 trades data for services, or that Google’s use of user data is not in connection with a sale or  
8 advertisement of merchandise, would be inconsistent with the statutory text and case law, ignores  
9 the billions of dollars Google has earned from Arizonan data, and would require creating an  
10 exception that is not in the CFA.

11 **II. GOOGLE’S MOTION FAILS GIVEN THE FULL ISSUES IN THIS CASE**

12 There are multiple reasons why Google’s Motion cannot justify summary judgment.  
13 Google contends (Mot. at 1:2–13, 7:20–26) the only “transactions” at issue are initial sales of  
14 Android phones and Google apps, but neither the CFA nor the State’s theories are so limited.  
15 While the State alleges deceptive sales of Nexus and Pixel phones (and Android devices),  
16 Google’s deceptive conduct also includes its ongoing transactions where it provides services (*e.g.*,  
17 search results) in exchange for user data, and Google misrepresents when and how it acquires  
18 users’ location data in exchange for its services. Google then monetizes that deceptively acquired  
19 data by matching users with targeted advertisements, which are sales *and* advertisements.

20 Google’s Motion also does not challenge the State’s allegations regarding (1) omissions  
21 (rather than actions), (2) practices of omissions, and (3) unfair acts and practices. As the Court  
22 noted when it denied Google’s motion to dismiss, the State alleges Google makes unlawful  
23 omissions regarding location tracking during the setup of Android phones, Compl. ¶ 22(a), and  
24 when advertising its devices and software to consumers, *Id.* ¶ 22(c). Google does not disclose its  
25 location tracking practices to consumers when advertising its phones. SSOF ¶ 44. Google likewise  
26 fails to disclose the nature and extent of its location tracking in connection with the sale and  
27 advertising of Android phones or its other apps and services. A party’s intent for a consumer to  
28 rely upon an omission is a factual inquiry, *State ex rel. Horne v. AutoZone, Inc.*, 229 Ariz. 358,

1 362 ¶15 (2012) (*AutoZone*), and Google does not challenge that element in its Motion. The State’s  
2 allegations concerning Google’s violation of the Omissions clause are unopposed. The same is  
3 true for a practice of omissions, *id.* ¶ 14, and unfair conduct.

4 Google’s Motion also overlooks key parts of the Court’s prior rulings. In denying Google’s  
5 motion to dismiss, the Court acknowledged the State set forth a variety of ways Google’s  
6 conduct—and its omissions—are “in connection with” the sale or advertising of merchandise. *See,*  
7 *e.g.*, 9/25/20 Minute Entry at 3-4.<sup>1</sup> The Court noted: “Whether or not the deception was actually  
8 in connection with the sale or advertising of merchandise presents a factual question.” *Id.* at 9.  
9 Google’s Motion does not disprove any facts alleged in the Complaint—it just makes the same  
10 *legal* arguments in the guise of a summary judgment motion. Indeed, the State’s Complaint cites  
11 and encloses extensive evidence (including Google’s sworn testimony and documents), all of  
12 which substantiate facts that survived Google’s motion to dismiss. In denying the State’s partial  
13 MSJ, the Court emphasized these issues involved questions of fact. *See, e.g.*, 1/20/21 Minute Entry  
14 at 10, ¶ 3 (whether conduct was deceptive is a fact question); 11 (whether Google’s LH and WAA  
15 disclosures were deceptive is a fact question); 15, ¶ 2 (whether Google’s apps are sold is a “factual  
16 inquiry that cannot be resolved on a motion for summary judgment”); 16, ¶ 3 (whether the sale of  
17 ads is in connection with Google’s deception “[a]t a minimum, . . . is a factual inquiry”); 18 ¶ 1  
18 (whether setting up a Google account after buying a device is “in connection with” is a fact  
19 question). For all of these reasons, Google’s Motion should be denied.

### 20 **III. FACTUAL BACKGROUND**

#### 21 **A. Google is an advertising business that monetizes its users’ location information.**

22 Google uses purportedly “free” services, as well as software embedded in Android devices,  
23 to (1) gather data about users and (2) target ad placements to those users. Google’s revenue model  
24 depends on both of these steps. Google profits as advertisers bid more to appear higher and in  
25 more relevant search results. *See* SSOF ¶¶ 1–2.

##### 26 **1. Location has tremendous value to Google.**

27 Google contends that its software, apps and services cost no *money*. But none of these is

28 <sup>1</sup> “In connection with” means a relationship, association, or involvement. *See* Section IV(B)(1).

1 “free.” Even setting aside the fact that Google’s OS and apps are sold with the Android devices,  
2 Google uses its apps to collect user *data*, which is a valuable form of *consideration*.  
3 Acknowledging this, Google’s VP of Product for Ads, Jack Menzel, testified that products like  
4 Search and Maps are only “free” because Google can display ads to users. SSOF ¶¶ 3–5, 32, 42.  
5 Google frames its data acquisition as a means of providing users with better services, SSOF ¶ 5,  
6 but tells advertisers that it tracks user location data to better place their ads. SSOF ¶ 6. Internal  
7 documents illustrate how Google Location Services (GLS) is connected to sales:

8  
9  
10  
11  
12  
13  
14  
15  
16  
17  
18  
19 SSOF ¶ 7. The above shows [REDACTED] including [REDACTED] creating [REDACTED]  
20 and [REDACTED] in the form of [REDACTED] through [REDACTED] *Id.*; see also SSOF ¶  
21 8 (Google location systems provide location for Ads); SSOF ¶ 9 (location from WAA is used to  
22 geo-target ads, and is [REDACTED]);  
23 SSOF ¶ 10 (geo-targeting is an [REDACTED]  
24 [REDACTED]); SSOF ¶ 11 (user location [REDACTED]  
25 [REDACTED]). Only in  
26 this litigation does Google argue that its location collection has no connection to its services.

27 Google is an intermediary: it provides services to users and, in doing so, connects those  
28 users with ads from advertisers through those services. See SSOF ¶ 12, Alessandro Acquisti,

1 Curtis Taylor, and Liad Wagman, *Economics of Privacy*, J. Econ. Lit. 2016, 442, 457 (2016)  
2 (companies like Google, Facebook, and Amazon “act as intermediaries, selling advertising space  
3 to advertisers on one end and providing services and products to users on the other”). Location  
4 matters on both sides of this transaction, as Google needs user location to serve geo-targeted ads,  
5 which covers [REDACTED] SSOF ¶ 13; *see also* SSOF ¶¶ 14–18 (describing  
6 Google’s incremental revenue from its geo-targeting advertising business). Google’s internal  
7 presentations exalt the revenues sourced from user location. SSOF ¶¶ 19–20.

8 Indeed, Google even prompts advertisers to geo-target its users, touting that doing so can  
9 boost an ad campaign’s value. SSOF ¶ 21. Advertisers can bid more to show their ads more  
10 frequently to users in certain locations. SSOF ¶ 22. Or they can “radius target,” which increases  
11 their bid when a user is within a certain radius of a business. *Id.* Google even reports to advertisers  
12 the efficacy of their geo-targeted ads. SSOF ¶ 23. And for some advertisers, Google itself selects  
13 the geo-targets, directly exploiting the user location data it collects. SSOF ¶ 24.

14 Location data is used for nearly all of Google’s ad services, and Google admits in internal  
15 documents that location *drives* its ad revenue. *See* SSOF ¶ 25 ([REDACTED]  
16 [REDACTED]). Location is [REDACTED] and  
17 better location signals result in [REDACTED] SSOF ¶ 26. With location  
18 playing such an important role in Google’s business model, Google [REDACTED]  
19 [REDACTED] SSOF ¶  
20 27 ([REDACTED]). Google will not stop  
21 until its knowledge about users is *perfected*:

22 [REDACTED]  
23 [REDACTED]  
24 [REDACTED]  
25 SSOF ¶ 28. Given the backlash if Google told users that it compulsively catalogs every aspect of  
26 their lives, it instead chooses deceit.

27 **2. Google uses deceptive and unfair practices to collect location data.**

28 When consumers buy an Android device, it comes pre-loaded with functions that Google

1 uses to track the consumers' location. SSOF ¶ 29. This includes sensors in the device, as well as  
2 settings that are either part of the users' Google account or the Android OS (e.g., Location History  
3 (LH), Web & App Activity (WAA), WiFi, and WiFi Scanning). *Id.* Some of these "Settings" (e.g.,  
4 WAA) are pre-enabled, meaning that, by default, Google uses them to collect location data. SSOF  
5 ¶ 54. When consumers purchase Android devices, they receive a device "configured to provide  
6 Google with the ability to collect, store and exploit a user's location information through the  
7 software on the device." SSOF ¶ 36. And because any Android device offering Google Mobile  
8 Services (GMS) (which includes popular Google apps) *must* use Google's version of Android,  
9 most Android devices are sold with the infrastructure Google uses to exploit location data. *Id.*

10 In addition to device sensors and Android settings, Google also collects, stores and exploits  
11 location data whenever users interact with Google's apps, products and services. SSOF ¶ 31.  
12 Google's IPGeo services enable "nearly all transactions with Google products or services [to]  
13 become an opportunity for Google to collect and exploit the user's location information—even if  
14 the user has disabled the location related settings." *Id.* One Google engineer explains, ██████████

15 ██████████  
16 ██████████  
17 ██████████ *Id.* Another internal service at Google known as ██████████ aggregates  
18 location data to determine the user's best known location. SSOF ¶ 32. ██████████ and IPGeo cannot  
19 be disabled—██████████. SSOF ¶ 31. That location  
20 information is used for geo-targeting ads, even when device location and ad personalization are  
21 off. SSOF ¶¶ 31–32. Google puts in place this hidden scheme *before* users buy or interact with  
22 Google's products and services. SSOF ¶ 32.

23 **B. Google is involved in various types of sales and advertising of merchandise.**

24 The State alleges several theories in which Google's deceptive and unfair conduct (and  
25 omissions) are "in connection with" the sale or advertising of merchandise. *E.g.*, Compl. ¶¶ 22–  
26 26. For illustrating the "connection" to Google's unlawful conduct, this Response emphasizes  
27 three examples: (1) sales of Google's apps and services in exchange for users' data; (2) sales and  
28 advertisements of Android smartphones (both hardware and pre-loaded apps and software); and

1 (3) sales of “transactions” through Google’s two-sided platform (services jointly and  
2 simultaneously consumed by consumers and advertisers, which are both sales and advertisements  
3 of merchandise under the CFA). These are not just one-time sales, but rather an ongoing series of  
4 transactions.

5 **1. Google engages in ongoing sales of its services in exchange for a user’s data.**

6 Google provides apps and services (*e.g.*, Search, Maps, Assistant) to users.<sup>2</sup> In exchange,  
7 users agree to certain terms for collecting some personal data each time they use the services.  
8 SSOF ¶ 33. This type of transaction—*i.e.*, trading data for services—is a discrete type of business.  
9 *See, e.g.*, SSOF ¶ 34 (Ex. 12) Acquisti, *supra* at 448; (Ex. 48) P. Schwartz, *Property, Privacy and*  
10 *Personal Data*, 117 Harv. L. Rev. 2055, 2071 (2004). Each search (or other interaction where  
11 Google collects data) by a user is a sale, whereby Google provides a service and receives data in  
12 exchange. This is how service providers can “make money while not charging for their products.”  
13 Schwartz, *supra*, at 2071; *see also* SSOF at ¶¶ 3–5, 32 ( [REDACTED]  
14 [REDACTED] ). These are not “free” services, but rather  
15 trades for valuable consideration. SSOF ¶ 35. [REDACTED]  
16 [REDACTED]

17 [REDACTED] SSOF ¶ 42 (emphasis added).

18 **2. Google sells and advertises Android devices and pre-loaded software.**

19 As explained above and in the Nielson Declaration, Google develops a proprietary version  
20 of the Android OS which pre-loads Google software on the device.<sup>3</sup> SSOF ¶ 36. As part of the  
21 set-up process in connection with purchasing an Android device, a user must either create an  
22 account or sign into a pre-existing account to meaningfully use the device. SSOF ¶ 37. During  
23 account set-up, Google presents users a choice to toggle certain location settings on or off, like  
24 LH and WAA. *Id.* Android devices have various settings that apply to the account-, device-, or  
25 app-level. *Id.* For example, LH and WAA are account-level settings, device location is a device-  
26 level setting, and location runtime permissions are app-level settings. *Id.* Google admits users

27 \_\_\_\_\_  
28 <sup>2</sup> Google’s services are also offered on iOS devices. *See* SSOF ¶ 30.

<sup>3</sup> References to “Android” will be to Google’s proprietary version.

1 must agree to its Store Sales Terms before buying a Nexus or Pixel device. SSOF ¶ 38. Its privacy  
2 policy and help pages are made available to users at all times during this process, including when  
3 purchasing a device. SSOF ¶ 39.

4 **3. Google sells “transactions” between users and advertisers, which also involve**  
5 **the advertisement of merchandise.**

6 As discussed above in Section III(B)(1), Google deals directly with users on an ongoing  
7 basis when selling its services in exchange for data. Consumers also play a necessary role in  
8 Google’s ad business, which itself constitutes a sale under the CFA. As both the State’s and  
9 Google’s economists explain, Google’s advertising business operates as a two-sided platform.  
10 SSOF ¶¶ 40–42. On one side, users receive services from Google such as apps (*e.g.*, Search, Maps)  
11 or the Android OS. *Id.* These services transfer location data to Google. *See* Section III(A)(2). In  
12 the meantime, on the other side of the platform, Google also sells advertising services, promising  
13 it can deliver ads to users in specific locations. SSOF ¶¶ 21–22. With Google’s help, advertisers  
14 geo-target their ads, and Google delivers ads to users, relying on the location data it took from  
15 those users. SSOF ¶¶ 2, 6, 7, 9. While this process seems complex, it occurs in real time as a user  
16 interacts with Google’s services. Through this two-sided platform model, Google offers no-charge  
17 services to users while earning billions in revenue from advertisers. SSOF ¶¶ 3–5.

18 Google’s exchanges with users and advertisers are part of a single, congruent sale. The  
19 U.S. Supreme Court has emphasized that such two-sided platforms are “best understood as  
20 ‘suppl[ying] *only one product*’—*transactions*” which is “*jointly consumed*” by the supplier’s  
21 customers on both sides of its “two-sided transaction.” *Ohio v. Am. Express Co.*, 138 S. Ct. 2274,  
22 2286 & n.8 (2018) (emphasis added). According to Google Chief Economist Hal Varian, [REDACTED]  
23 [REDACTED] *See* SSOF ¶¶ 40, 42 (Ex. 53) Varian, Hal  
24 R., *The Economics of Internet Search*, *Rivista di Politica Economica*, p. 179 (2006); *see also* (Ex.  
25 54) Rysman, Marc, *The Economics of Two-Sided Markets*, *Journal of Economic Perspectives*,  
26 Vol. 23, No. 3, Summer 2009, 125, 125, 128. Any unfair or deceptive conduct in connection with  
27 this two-sided platform is very much connected to the sale and advertisement of merchandise to  
28 users—who are needed for the platform to function at all. SSOF ¶ 41.

1        **C. How Google deceives users.**

2            Google uses a deceptive and unfair maze of settings and tools to collect, store and exploit  
3 its users' location data. Google's Motion does not challenge the deceptions, and so for the  
4 purposes of this Response, the existence of deceptive acts and practices should be a given. *See*  
5 10/7/21 Hr'G Tr. at 4:9, 6:9 (noting the motion only challenges the "in connection with" element).  
6 Still, a short description of some of those acts, practices, and omissions is helpful for  
7 understanding their connection to the sales and advertising of merchandise.<sup>4</sup>

8            **1. Google omits accurate information about location tracking in its advertisements.**

9            When Google's apps and Android devices are sold and advertised, Google does not  
10 accurately inform users how it collects, stores and exploits their location data. For example, it fails  
11 to disclose that it will collect and exploit that data no matter what, and that various settings don't  
12 actually stop Google from doing so. SSOF ¶ 44. As Dr. Nielson explains, while consumers think  
13 they are buying an Android device, they are actually getting a device that Google uses to track  
14 their location—with much of that functionality built into the device. SSOF ¶ 36. Similarly, through  
15 Google's inescapable IPGeo and [REDACTED] IPGeo functions, "nearly all transactions with Google  
16 products or services become an opportunity for Google to collect and exploit the user's location  
17 information—even if the user has disabled the location related settings." SSOF ¶ 31.

18            This conduct is actionable under both the Act and Omission clauses of the CFA. *See*  
19 *AutoZone*, 229 Ariz. at 361–62 ¶ 14–15 (application of CFA's Act and Omission clauses). Because  
20 consumers pay money for Android devices, Google cannot dispute such pre-purchase practices  
21 and omissions are "in connection with" the sale or advertisement of merchandise.

22            **2. Google affirmatively deceives users about its Location History settings.**

23            Google's deceptive and unfair conduct often comes in the form of misleading disclosures  
24 that Google presents to users online, available 24/7. SSOF ¶ 39. Google makes these disclosures  
25 available to users before they purchase an Android device, set up a Google Account or download  
26 Google apps. *Id.* Moreover, the misleading disclosures are available to users at all times during  
27 their use of Google's services (the users' ongoing transactions with Google). In other words,

28            <sup>4</sup> For more details on Google's other deceptive practices, please see SSOF at ¶¶ 64–70, 78–81.

1 Google is constantly deceiving users through its disclosures. *See* SSOF ¶¶ 39, 43. For example,  
2 until the AP article in 2018, Google represented on its public help page, “[w]ith Location History  
3 off, the places you go are no longer stored.” SSOF ¶ 45, *see also* SSOF ¶ 44–46 (telling Android  
4 users that LH was the only setting relevant to “the places your device has been”). This was not  
5 true. Before May 2019, even if LH was off, Google would still store a user’s *precise* location  
6 using other location services, like WAA. SSOF ¶ 47. Even after May 2019, users could not prevent  
7 Google from saving their locations. *See infra* Section II(c)(4).

8 That LH defaults to “off” does not narrow the scope of consumers for whom this is a false  
9 representation—for example, a consumer who never enables LH would reasonably conclude the  
10 places they go are not stored since their LH setting has always been “off.” SSOF ¶ 52 (

11   
12   
13   
14   
15   
16   
17   
18   
19   
20   
21   
22   
23   
24   
25   
26   
27   
28   
Likewise, if a user disables LH before connecting that account to a new phone, the  
consumer would expect Google to stop collecting location information. *See* SSOF ¶ 50. Google  
employees knew this statement about LH was false and openly discussed it. *See* SSOF ¶¶ 48–49.

### 3. Google deceives users by not explaining WAA’s relationship to location.

When downloading an app or engaging in a Google service, a user is presented with  
Google’s privacy policy (also accessible at all times online), which, as late as May 25, 2018, made  
no mention of WAA’s connection to location. SSOF ¶ 53. Users setting up a Google account  
before 2018 never received a disclosure that WAA collects location data from their new device,  
*id.*, despite WAA being on by default. SSOF ¶ 54. Moreover, users who download apps from the  
Google Play store didn’t receive a disclosure that WAA collects location data when using that app  
or service. SSOF ¶ 55. Google knew that users were confused by this narrative, SSOF ¶¶ 48–52,  
and even its employees were shocked when they learned WAA tracked location. SSOF ¶ 56.

### 4. Google deceptively and unfairly exploits “coarsened” location data.

Users are given the option to disable their device’s Location Master (“LM”) so that Google  
would no longer collect or use any location information. But for Google, “off” does not mean  
“off.” Rather, “off” means Google will still acquire location, but that data will be “coarsened.”  
SSOF ¶ 57. Google takes user location no matter what users’ settings are—even though it presents

1 the option of turning off location settings during device setup. *See* SSOFF ¶ 58. Users have no  
2 control over the location data taken from certain sources, like IP addresses, which Google uses to  
3 serve ads. *Id.* That Google will *always* track user location, regardless of the settings they employ,  
4 is omitted from Google’s disclosures. SSOFF ¶¶ 33, 57–61. Google knows this policy (called “Off  
5 Means Coarse”) defies user expectations, but still maintains the policy today. SSOFF ¶¶ 59–61.

6 **5. Google deceptively and unfairly collects location data through runtime settings.**

7 Google represents to its users that when they are acquiring or interacting with apps, they  
8 can prevent the specific apps from obtaining location information through “runtime” settings.  
9 SSOFF ¶ 67. But in reality, the apps have the ability to by-pass the users’ preferences and obtain  
10 location information anyway. SSOFF ¶¶ 68–70. Google has long been aware of this [REDACTED] yet  
11 has taken no steps to correct it. SSOFF ¶ 68.

12 **6. Google’s omissions constitute a deceitful “practice” under the CFA.**

13 The Arizona Supreme Court recognized that when a seller engages in “a habitual action  
14 and something more than an accumulation of a number of individual instances of conduct,” this  
15 meets the definition of a “practice,” which can be subject to the Act Clause of the CFA. *AutoZone*,  
16 229 Ariz. at 361–62 ¶ 14. The above sections represent only a sample of Google’s wrongful  
17 conduct,<sup>5</sup> and demonstrate Google developed deceptive (and unfair) *practices* toward users.

18 **IV. LEGAL ARGUMENT**

19 Google’s unfair and deceptive conduct violates the CFA. Section IV(A) discusses some of  
20 the sales and advertisements of merchandise at issue here. Section IV(B) explains that “in  
21 connection with” is broadly construed to encompass Google’s conduct. And as explained in  
22 Section IV(C), under any reasonable construction of the CFA, Google’s deceptive acts and  
23 practices are “in connection with” the sales or advertisements of merchandise.<sup>6</sup>

24 <sup>5</sup> For other examples of Google’s deceitful and unfair behavior, *see* SSOFF ¶¶ 64–66 (designing  
25 user interface to deceive users into giving their location data); SSOFF ¶¶ 78–81 (tricking users by  
26 obtaining location from ULR, sWAA, and WiFi, and targeting ads when Ads Personalization is  
27 off).

27 <sup>6</sup> Under Rule 56(a), Google bears a “heavy” burden of presenting “sufficient undisputed  
28 admissible evidence to establish its entitlement to judgment.” *Wells Fargo Bank, N.A. v. Allen*,  
231 Ariz. 209, 213 ¶ 17 (App. 2012). All reasonable inferences are drawn in the State’s favor. *Id.*  
This burden never shifts, and the State can also successfully defend against the motion by showing  
a dispute of material facts on the issue. *Rhoads v. Harvey Pubs.*, 131 Ariz. 267, 269 (App. 1981).

1 The legal framework proposed by Google is wrong, but preliminarily, it is important to  
2 emphasize that extensive evidence supports a finding that Google’s deceptive and unfair conduct  
3 is “in connection with” the sale or advertisement of merchandise under any plausible reading of  
4 the CFA. The State has laid out multiple types of pre-sale deception related to the various types  
5 of transactions in this case.<sup>7</sup> For example, Google’s false disclosures are made available to users  
6 before and during the time of sale. SSOF ¶ 39. Likewise, Google’s deceptive scheme to collect  
7 and exploit location information is programmed into the devices and software before the users’  
8 purchase or interaction with Google. SSOF ¶¶ 29, 32. And its Off Means Coarse policy completely  
9 unravels any of the user’s pre-sale bargaining by tracking users no matter what their settings are.  
10 Even under its strained construction of “in connection with,” Google’s acts and omissions are pre-  
11 sale and part of the bargaining process.

12 **A. Google engages in multiple types of sales and advertisements of merchandise.**

13 **1. The CFA makes clear a “sale” is “for any consideration,” not just money.**

14 Google’s Chief Economist testified that [REDACTED]  
15 [REDACTED] SSOF ¶ 42. The State agrees. The CFA’s definition of “sale” covers “any  
16 sale, offer for sale or attempt to sell any merchandise for any consideration.” A.R.S. § 44-1521(7).<sup>8</sup>  
17 Consideration includes “any benefit to the promisor or detriment to the promisee,” *Best Choice*  
18 *Fund, LLC v. Low & Childers, P.C.*, 228 Ariz. 502, 513, ¶ 41 (App. 2011), *as amended* (Jan. 6,  
19 2012) (internal citations omitted), and does not necessarily require a monetary exchange, *see Keg*  
20 *Restaurants Ariz., Inc. v. Jones*, 240 Ariz. 64, 76, ¶ 43 (App. 2016). Arizona courts have held that  
21 the CFA protects consumers even when consideration other than money is exchanged. *See*  
22 *Villegas v. Transamerica Fin. Serv. Inc.*, 147 Ariz. 100, 102 (App. 1985).

23 \_\_\_\_\_  
24 <sup>7</sup> Google claims the State cannot raise “new theories.” (Mot. at 10), but they are not new and in  
25 any event Google mistakenly invokes a principle that applies after the close of discovery. Google’s  
26 case (*Hallgren*) relies on *Pickern v. Pier 1 Imports (U.S.), Inc.*, 457 F.3d 963, 968–69 (9th Cir.  
27 2006) to make its point, but that case is limited to situations where a party raises new factual  
28 assertions *after the close of discovery*. *See Lynn v. Invitae Corp.*, 466 F. Supp. 3d 1038, 1042 (D.  
Ariz. 2020). In that same opinion, Judge Tuchi also calls out the irony of a moving party citing  
lack of disclosure for a theory it identified in its own motion. The same logic applies here—  
discovery hasn’t closed and Google is well-aware of the State’s theories.

<sup>8</sup> “Merchandise” includes “any objects, wares, goods, commodities, intangibles, real estate, or  
services.” *Id.* § 44-1521(5).

1 Both legal and non-legal dictionary definitions of “consideration” confirm this. *See*  
2 *Consideration, The American Heritage Dictionary of the English Language* (5th ed. 2020)  
3 (defining “consideration” as “7. Law Something promised, given, or done that has the effect of  
4 making an agreement a legally enforceable contract.”); *Consideration, Black’s Law Dictionary*  
5 (11th ed. 2019) (“1. Something (such as an act, a forbearance, or a return promise) bargained for  
6 and received by a promisor from a promisee; that which motivates a person to do something, esp.  
7 to engage in a legal act.”). And a sale of information is a “sale” under the CFA.<sup>9</sup>

## 8 **2. Google’s provision of products and services are “sales” under the CFA.**

9 Google’s Motion does not seriously dispute what constitutes a “sale.” Indeed, Google  
10 engages in numerous “sales” of merchandise to Arizonans, including the sales of services, objects,  
11 goods, and intangibles. The Court’s Order denying Google’s motion to dismiss (pp. 3–4)  
12 acknowledges the State has alleged that multiple types of sales and advertising are “connected to”  
13 Google’s challenged acts and omissions—and most of those are unchallenged here by Google.  
14 The State will focus on just a few examples below to illustrate how they are “connected to”  
15 Google’s deceptive and unfair conduct and omissions.

### 16 **a. Google exchanging its services for user data constitutes a “sale.”**

17 As explained in Sections III(A)(1) and (B)(1), Google collects personal data from users in  
18 exchange for its apps and services. *See* SSOF ¶ 33, Ex. 45 (“When you use our services, you’re  
19 trusting us with your information. . . . We collect information to provide better services to all our  
20 users – . . . like which ads you’ll find most useful.”); Schwartz, *supra*, at 2056–57 (personal  
21 information is an important currency and corporate asset to companies); *see also* Acquisti, *supra*,  
22 at 444 (personal data has “obvious and substantial economic value” that can be used for  
23 advertising). Each use of a Google service (like Search) is a sale under the CFA: the user receives  
24 a service (*i.e.*, “merchandise”) in exchange for personal data (*i.e.*, “consideration”). *See* SSOF

25 <sup>9</sup> *See State ex. rel. Woods v. Sgrillo*, 176 Ariz. 148, 149 (App. 1993). In *Sgrillo*, the defendant  
26 sold information to consumers about low interest credit cards (which it then provided to credit  
27 card suppliers) and argued (like Google) the sale of information did not fall within the CFA’s  
28 scope. *Id.* at 148–49. Rejecting this argument, the court found that “[t]he broadly remedial  
purposes of the CFA should not be defeated by niggling distinctions unrelated to the protection of  
consumers by the elimination of fraud.” *Id.* at 149. The defendant’s actions were made “in  
connection [to a] sale” even if “their acts were in the aid of a sale by another entity.” *Id.*

1 ¶ 42 (Google’s advertising model is a [REDACTED]), *see also Calhoun*  
2 *v. Google LLC*, 526 F. Supp. 3d 605, 631-32 (N.D. Cal. 2021) (holding that Google’s terms of  
3 service establish an actionable contract between users and Google).

4 **b. The sale of Android devices for money is a “sale” under the CFA.**

5 As detailed in Section III(B)(2), Arizona consumers purchase Google’s devices and, in  
6 exchange, Google provides the product. Further, sale of other Android devices—even if not made  
7 by Google—still constitutes a sale for purposes of the CFA as Google provides the software with  
8 which the user interacts and which Google uses to deceptively and unfairly collect location data.  
9 A “sale” need not be made *by the defendant*. The CFA encompasses conduct “regardless of  
10 whether the deceiver is the seller.” *Sgrillo*, 176 Ariz. at 149. The State expressly alleges this point  
11 (which the Court acknowledged in denying Google’s motion to dismiss, 9/25/20 Minute Entry at  
12 3–4 ¶ b), and Google does not challenge it here.

13 **c. Google’s sale of transactions is a sale under the CFA.**

14 As discussed in Section III(B)(3), Google is a matching business. It provides merchandise  
15 to users in exchange for money and data, and then it also sells ad placements (also “merchandise”)  
16 to third parties and displays those ads to its users. This exchange constitutes one cohesive  
17 transaction, which falls within the scope of the CFA. *See Ohio*, 138 S. Ct. at 2286 & n.8 (2018)  
18 (describing the two-sided platform as “‘only one product’—transactions”). Google promises  
19 advertisers that it can place geo-targeted ads for them. On the other side of the transaction, Google  
20 offers services in exchange for the user’s location information. With this information in hand,  
21 Google can now serve the geo-targeted ad, fulfilling its obligation to advertisers and role as a two-  
22 sided platform. SSOF ¶ 41. But Google only fulfills this promise (to the tune of billions in  
23 revenue) by deceiving users into giving their location data. This process is one “sale” for purposes  
24 of the CFA. The CFA covers the “use” of deceptive or unfair acts and practices—precisely what  
25 Google is doing here. *See Powers v. Guar. RV, Inc.*, 229 Ariz. 555, 561 ¶ 19 (App. 2012).

26 **3. The ads Google shows users are “advertisements” under the CFA.**

27 Google operates its platform in connection with the advertisement of merchandise. The  
28 CFA forbids any unlawful practice “in connection with the . . . advertisement of any merchandise.”

1 A.R.S. § 44-1522. “‘Advertisement’ includes the attempt by publication, dissemination,  
2 solicitation or circulation, oral or written, to induce directly or indirectly any person to enter into  
3 any obligation or acquire any title or interest in any merchandise.” A.R.S. § 44-1521(1). Google  
4 publishes materials that induce the purchase of merchandise.

5 Google insists its advertising platforms should somehow be exempted from the purview of  
6 the CFA, but it fails to contend with the fact that the very next section after § 44-1522 makes clear  
7 that Google does not qualify for such an exemption. Namely, § 44-1523, titled “exemptions,”  
8 provides that the CFA shall not cover an owner, publisher, or operator when it “has no knowledge  
9 of the intent, design, or purpose of the advertiser.” *See also Powers*, 229 Ariz. at 561 ¶¶ 20–21  
10 (discussing § 44-1523). Google does not argue that its geo-targeting advertising platform qualifies  
11 for this exemption, nor could it make such an argument. Google does not merely have knowledge,  
12 but actually facilitates the deceptive and unfair acts and practices of collecting user data and then  
13 using that data to target ads to particular users. SSOF ¶¶ 21-24. Under the well-established canon  
14 of *expressio unius*, Google is not exempt from the CFA.<sup>10</sup>

15 **B. The CFA covers Google’s deceptive and unfair acts, practices, and omissions.**

16 **1. Under the CFA, “in connection with” means “related to.”**

17 The CFA broadly prohibits the “[t]he act, use or employment . . . of *any* deception,  
18 deceptive or unfair act or practice . . . or concealment, suppression or omission . . . in connection  
19 with the sale or advertisement of *any* merchandise.” A.R.S. § 44-1522(A) (emphasis added).  
20 Deceptive or unfair acts or practices are “in connection with” the sale or advertisement of  
21 merchandise if they have some relationship, association or involvement.

22 While not in a CFA case, Arizona courts construe the word “connection” to mean a  
23 relationship or association. *See State v. Bews*, 177 Ariz. 334, 336 (App. 1993) (“‘connection’ is  
24 defined as ‘a relationship or association in thought.’”); *see also Sands v. Bill Kay’s Tempe Dodge,*  
25 *Inc.*, 1 CA-CV 13-0051, 2014 WL 1118149, at \*4 ¶ 17 (Ariz. Ct. App. Mar. 20, 2014) (mem.  
26 decision) (interpreting §44-1522(A) as “go[ing] beyond the moment of sale” and relying on *Bews*,

27 <sup>10</sup> For the same reason, Google’s concern (Mot. at 13) about subjecting small advertisers to  
28 liability falls flat. Media outlets are not liable under the CFA as long as they meet § 44-1523. *See Powers*, 229 Ariz. at 561 ¶¶ 20–21.

1 177 Ariz. at 336, and other cases that “broadly constru[e] ‘in connection with’”).<sup>11</sup> As discussed  
2 below in more detail, Arizona (and other) courts also reject the notion that “in connection with”  
3 categorically excludes post-sale conduct.

4 Common dictionary definitions similarly confirm that “connection” requires only a logical  
5 relationship. The American Heritage Dictionary defines “in connection with” as “[i]n relation to;  
6 with respect to; concerning.” *Connection, The American Heritage Dictionary of the English*  
7 *Language* (5th ed. 2020). That dictionary similarly defines “in relation to” as “[i]n reference to;  
8 in connection with: *This letter from the bank is in relation to your mortgage.*” *Relation, The*  
9 *American Heritage Dictionary of the English Language* (5th ed. 2020). Thus, under the plain  
10 language of the term, a letter from a bank about a mortgage is “in connection with” the mortgage,  
11 even though the mortgage itself was entered into at an earlier time. “[N]o legal legerdemain should  
12 be used to change the meaning of simple English words so that the resulting interpretation  
13 conforms the statute to the sociological and economic views of judges or lawyers.” *Kilpatrick v.*  
14 *Superior Court*, 105 Ariz. 413, 421 (1970).

15 Google contends (Mot. at 8) that § 44-1522 focuses on the “bargaining process,” but that  
16 phrase appears nowhere in the statute. Indeed, limiting the CFA to deception that occurs only in  
17 the bargaining process would be tantamount to inserting a “reliance” element. Such a result is  
18 contrary to the express language of the statute, which applies “whether or not any person has in  
19 fact been misled.” A.R.S. § 44-1522(A). Reliance is not an element of claims brought by the AG  
20 on behalf of the State. *People ex rel. Babbitt v. Green Acres Tr.*, 127 Ariz. 160, 168 (App. 1980).

21 If the Legislature wanted to limit the CFA to conduct occurring as part of the “bargaining  
22 process,” it could have. The Legislature freely uses the term “induce” elsewhere in the CFA—the  
23 first provision defines “advertisement” as “the attempt . . . to induce directly or indirectly any  
24 person to enter into any obligation.” A.R.S. § 44-1521(1) (emphasis added). The Legislature did  
25 not include such a limitation in §44-1522(A), which confirms it did *not* intend that narrower scope  
26 here. *See, e.g., Ballesteros v. Am. Standard Ins. Co. of Wisc.*, 226 Ariz. 345, 349 ¶ 15 (2011)

27 <sup>11</sup> This decision issued before 1/1/2015 and is not precedential under AZ Supreme Ct. R. 111(c).  
28 But it shows that another court has borrowed the definition from *Bews* for purposes of construing  
“in connection with” in the CFA.

1 (“That the legislature included this requirement in some statutes, but not in [another], indicates  
2 that the omission of any such requirement . . . was intentional.”).

3 **2. Even if the CFA requires more than a tangential relationship, it contains no**  
4 **exception where parts of a scheme are post-sale or one-step removed.**

5 Google tries to focus on whether conduct is pre- or post-sale, but that is not the correct  
6 framework for analyzing the CFA. Google has invented a bright-line rule not in the statute, which  
7 it now asks the Court to adopt. To evade the CFA, Google contends that any conduct is immune  
8 from the CFA—no matter how related the conduct is to the sale or advertising of merchandise—  
9 so long as the conduct occurs after the sale. Google is mistaken.

10 First, Google identifies no statutory language that limits the CFA to only pre-sale conduct,  
11 much less the bargaining process. *Green Acres Tr.*, 127 Ariz. at 164 (“The terms of this provision  
12 are obviously quite broad and are not subject to restrictive interpretation because the Act is  
13 generally to be considered remedial in nature.”), *superseded by statute on other grounds*; *Madsen*  
14 *v. W. Am. Mortg. Co.*, 143 Ariz. 614, 618 (App. 1985) (CFA “is a broadly drafted remedial  
15 provision designed to eliminate unlawful practices in merchant-consumer transactions”). The  
16 relevant inquiry is simply whether the challenged conduct is “in connection with” a sale or  
17 advertising of merchandise—not whether it is pre-sale or part of a bargaining process.<sup>12</sup>

18 Second, Arizona courts have rejected the notion that the CFA is limited to pre-sale  
19 representations. In *State ex rel. Brnovich v. 6635 N. 19th Ave., Inc.*, No. 1 CA-CV 15-0550, 2016  
20 WL 7368620, ¶ 17 (Ariz. Ct. App. Dec. 20, 2016) (mem. decision),<sup>13</sup> the court rejected the same  
21 argument advanced here by Google—*i.e.*, that “in connection with” limits the CFA to pre-sale  
22 representations. In that case, the AG sought to enforce pre-complaint discovery as part of an  
23 investigation of a landlord. The landlord advertised clean apartments, but an inspection revealed  
24 that the units were in disrepair. *Id.* ¶ 4. The landlord tried to limit the discovery by arguing that  
25 the “in connection with” language “necessarily limits application of the CFA to [the landlord’s]

26 <sup>12</sup> Google’s motion advocates for the proposition it can mislead Arizona consumers however it  
27 wants after a user downloads an app. *See* Mot. at 14–17. A shocking claim, particularly because  
28 Google can update the behavior of any of its services without notifying users.

<sup>13</sup> This decision is being cited for persuasive value pursuant to Ariz. Supreme Court Rule  
111(c).

1 pre-lease representations.” *Id.* ¶ 17. The court found “no legal support for [this] argument.” *Id.*  
2 Indeed, the 19<sup>th</sup> Ave. court cited two earlier Arizona decision for the contrary position. *Id.* (citing  
3 *Schmidt v. Am. Leasco*, 139 Ariz. 509, 511 (App. 1983) (consumer fraud under CFA found in  
4 post-sale leasing arrangements, based on billing recreational vehicle owner for damages that  
5 should have been paid by renters) and *Howell v. Midway Holdings, Inc.*, 362 F. Supp. 2d 1158,  
6 1164–65 (D. Ariz. 2005) (consumer fraud under CFA based on lessor’s alteration of lease  
7 agreement after lessees signed it)).

8 Similarly, in *Dunlap v. Jimmy GMC of Tucson, Inc.*, the court applied the CFA to  
9 statements that occurred “prior to, *as well as after*” the consumer “accept[ed] delivery,” which  
10 was *after* they signed a binding contract that contained a “disclaimer.” 136 Ariz. 338, 342 (App.  
11 1983) (emphasis added). The Dunlaps bought an RV, but complained of several problems after  
12 delivery. *Id.* at 340. Before accepting delivery, they were assured that all problems would be  
13 remedied. *Id.* After accepting delivery, they discovered additional problems, which they were  
14 again assured would be fixed—which did not happen. *Id.* The Dunlaps brought a CFA claim and  
15 prevailed at a jury trial, and the district court denied the defendant’s JNOV. *Id.* at 339–40. The  
16 Court of Appeals affirmed, specifically noting that representations were made to the plaintiff  
17 before and *after* the acceptance of delivery, and that the jury could have determined that those  
18 representations were in connection to a sale. *Id.* at 342.<sup>14</sup>

19 As explained above, the phrase “in connection with,” as used in the CFA, “is a broad phrase  
20 that goes beyond the moment of sale.” *Sands*, 2014 WL 1118149, at \*4 ¶ 17. Unfair and deceptive  
21 conduct is prohibited under the CFA, so long as it is “connected” to the sale or advertising of  
22 merchandise. There is no categorical exception for “post-sale” deception.

23  
24 <sup>14</sup> The Court referenced *Dunlap*, *Schmidt*, and *Howell* in its order denying Google’s Motion to  
25 Dismiss (at 9) as only involving pre-sale misrepresentations. A close read of these cases, however,  
26 reveals that post-sale (or post-service) misrepresentations were also held to support a violation.  
27 For example, in *Howell*, the plaintiffs “clarified” that their ACFA claim was based defendant’s  
28 alteration of the Lease Agreement “after they signed it.” 362 F. Supp. 2d at 1164. In that same  
order denying Google’s Motion to Dismiss (at 8), the Court cited *Dunlap*, noting “Conduct that  
occurs prior to or after the consumers acceptance of merchandise can qualify.” Similarly, this  
Court identified *Sands* as only involving misrepresentations made before completion of the sale.  
But additional misrepresentations were made after the plaintiff wished to proceed upon inspecting  
the vehicle and learning of the repairs needed. 2014 WL 1118149, at \*1.

1 Third, contrary to Google’s suggestion (Mot. at 14), the CFA “does not expressly require  
2 a direct merchant-consumer transaction.” *Watts v. Medicis Pharm. Corp.*, 239 Ariz. 19, 28 ¶ 31  
3 (2016). It encompasses conduct “regardless of whether the deceiver is the seller.” *Sgrillo*, 176  
4 Ariz. at 149. In this vein, “[t]he CFA does not limit liability to the originator of a  
5 misrepresentation. Rather, it broadly extends liability to any person who ‘uses’ the  
6 misrepresentation in connection with the sale of merchandise.” *Powers*, 229 Ariz. at 561, ¶ 19.

7 Thus, even when the deceptive or unfair act is one step removed from the transaction,  
8 Arizona courts consider the act “in connection with” a sale or advertising. In *State of Arizona v.*  
9 *Valley Delivery*, Superior Court Judge Mikitish held that a company that gathers data from  
10 consumers for use in a transaction with a third party could be liable under the CFA. Minute Entry,  
11 CV 2020-002880 \*2–3 (May 22, 2020); SSOF ¶ 71. The defendant left fake missed-delivery tags  
12 at Arizona homes, which prompted consumers to call and provide personal information. *Id.* The  
13 defendant then gave that information to other companies for marketing. *Id.* The defendant moved  
14 to dismiss, arguing its practices were not covered by the CFA because its door tags did not induce  
15 any person to acquire merchandise. *Id.* The court denied the motion, holding that the door tags  
16 were “in connection with” a sale or advertisement of merchandise:

17 [The tags were] left for the purposes of gathering information which, in turn, is  
18 given to telemarketers for the purpose of contacting individuals to buy services or  
19 products. While the tags themselves do not advertise a product or service, they are  
only one step removed.

20 *Id.* The same logic should apply here. Google’s deceptions are, at most, only “one step removed”  
21 from the sale and advertising of merchandise, and the CFA applies with full force.

22 In the context of federal securities law, the U.S. Supreme Court has also held that deception  
23 one step removed from the sale of securities is nonetheless “in connection with” with a sale. In  
24 *S.E.C. v. Zandford*, the defendant sold his customer’s securities and used the proceeds for his own  
25 benefit without the customer’s knowledge. 535 U.S. 813, 815 (2002). The defendant argued that  
26 because his sales of securities were perfectly lawful, his post-sale conversion of funds was not “in  
27 connection with” the sale of securities and therefore outside the scope of Rule 10(b)-5. *Id.* at 820.  
28 Rejecting that argument, the Supreme Court explained that the defendant’s manipulative conduct

1 was part of a “fraudulent scheme,” and “the sales are properly viewed as a ‘course of business.’”  
2 *Id.* at 820–821. Because the statute was intended to be “construed not technically and restrictively,  
3 but flexibly to effectuate its remedial purpose,” the defendant’s “fraud coincided with the sales  
4 themselves” as “each sale was made to further [the defendant’s] fraudulent scheme.” *Id.* at 819–  
5 20 (internal citations omitted). Similarly, Google employs a fraudulent scheme as part of a “course  
6 of business,” which it put in place before any sales to or transactions with consumers. *See* SSOFF  
7 ¶¶ 29, 32, 39. It deceptively harvests user location data, which it then uses to sell advertising  
8 placements. Just like in *Zandford*, this relationship satisfies the “in connection with” element.

### 9 **3. Other courts persuasively reject Google’s argument.**

#### 10 **a. Other States’ cases and the 2013 “unfairness” amendment to § 44-1522(A).**

11 Courts around the country have rejected attempts to impose a temporal restriction into acts  
12 like the CFA. For example, the Iowa Supreme Court—interpreting a statute that is similar to  
13 Arizona’s law<sup>15</sup>—expressly rejected the notion that only pre-sale conduct is governed by their  
14 CFA. *State ex rel. Miller v. Cutty’s Des Moines Camping Club, Inc.*, 694 N.W. 2d 518, 525–26  
15 (Iowa 2005). The Iowa Court began by noting that, like Arizona’s law, its CFA does not define  
16 “in connection with.” *Id.* It then rejected the bright-line rule Google advances here:

17 [W]e point out that nothing in the Act places a bright-line temporal limit upon the  
18 Act’s purview, as the [defendant] contends. The Act merely requires the activity be  
19 “in connection with,” not “prior to” or “at the time of,” the sale of the merchandise.  
20 Nothing in the phrase “in connection with” constrains the Act’s scope to only those  
21 business practices occurring prior to or at the time of the sale.

22 *Id.* The court refused to “judicially superinscribe” a temporal limit into the act, which “would not  
23 only violate well-established canons of statutory interpretation, but also conflict with the liberal  
24 interpretation we must give the statute.” *Id.* at 526. It concluded that the Iowa CFA encompasses  
25 post-sale acts, and it cited courts across the country holding the same.<sup>16</sup> *Id.* at 526–27 (including

25 <sup>15</sup> The Arizona Supreme Court cited the Iowa CFA as similar to Arizona’s, and followed the  
26 Iowa Supreme Court for construing another aspect of the CFA. *AutoZone*, 229 Ariz. at 363 ¶ 22.

27 <sup>16</sup> Even the dissent in *Miller* rejected a bright-line rule, acknowledging “there may be instances  
28 in which events occurring subsequent to the sale or lease of merchandise are so preordained by  
the sale or lease transaction that they warrant action under” the CFA. *Id.* at 531 (Ternus, J.,  
dissenting). Here, the evidence shows that Google’s deceptive and unfair conduct is very much  
“preordained”—it is programmed into merchandise by Google *before* sales to consumers.

1 Delaware, Ohio, Colorado, Illinois, Texas, and Washington cases, and noting contrary statutes  
2 only forbid fraud, not unfair practices); *see also Showpiece Homes Corp. v. Assurance Co. of Am.*,  
3 38 P.3d 47, 58–59 (Colo. 2001) (holding that Colorado’s CFA applies to post-sale activity because  
4 the statute makes no temporal limitation).

5 Further confirming the absence of any temporal restriction is a 2013 amendment, which  
6 added “unfair act or practice” to the CFA. *See* 2013 Ariz. Sess. Laws ch. 143 § 4 (1st Reg. Sess.).  
7 In doing so, the Legislature intended to “track[] the standard applicable in federal law and in most  
8 other states.”<sup>17</sup> The legislative history explains that adding “unfair” would “expand” the CFA’s  
9 reach to cover “all forms of practice which are unfair or deceptive to users.”<sup>18</sup> Thus, the  
10 Legislature wanted to broadly cover unfair conduct without any bright-line limitations, consistent  
11 with federal and other states’ laws. *See State v. Patel*, 251 Ariz. 131, 139 ¶ 31 (2021)  
12 (“[l]egislative materials . . . underscore[] the motivation for and goal of the legislation”). Again,  
13 the Legislature has never and did not limit “in connection with” only to pre-sale conduct.

14 Construing Arizona’s CFA consistently with federal and most other states’ laws, there is  
15 no exception for post-sale conduct. *See e.g., Miller*, 694 N.W.2d at 527 (placing a temporal  
16 limitation would “eviscerate” the act’s protection against unfairness) (collecting cases); *In re Sw.*  
17 *Sunsites, Inc.*, 105 F.T.C. 7, \*113 (1985) *aff’d*, 785 F.2d 1431 (9th Cir. 1986) (finding unfairness  
18 where consumers “continue[d] paying substantial amounts for land under their purchase  
19 agreements . . . through a variety of continuing misrepresentations” and noting “[t]here can be no  
20 benefit to society from the dissemination of misrepresentations that induce consumers to continue  
21 making payments that they might very well have terminated if they had not been misinformed”);  
22 *F.T.C. v. Hispanic Global Way, Corp.*, No. 14-22018-CIV, 2014 WL 12531538, at \*2 ¶ II(J) (S.D.  
23 Fl. 2014) (defendant’s post-sale conduct was punishable by the FTC Act, even though  
24 “[d]efendants already had the consumer’s money for the purchase price payment”); *Orkin*  
25 *Exterminating Co., Inc. v. F.T.C.*, 849 F.2d 1354, 1357, 1365, 1368 (11th Cir. 1988) (upholding

26 <sup>17</sup> Floor Amendment, [https://www.azleg.gov/legtext/51leg/1R/adopted/](https://www.azleg.gov/legtext/51leg/1R/adopted/2396SHOOTER1025.pdf)  
27 [2396SHOOTER1025.pdf](https://www.azleg.gov/legtext/51leg/1R/adopted/2396SHOOTER1025.pdf). “The CFA was based on legislation developed by the Council on State  
28 Government’s Committee on Suggested State Legislation.” *AutoZone*, 229 Ariz. at 363 ¶ 22.

<sup>18</sup> *See Suggested State Legislation*, Vol. XXVI, at C-4  
[https://www.azleg.gov/legtext/51leg/1r/summary/h.hb2396\\_concurrusememo.pdf](https://www.azleg.gov/legtext/51leg/1r/summary/h.hb2396_concurrusememo.pdf).

1 an FTC order that punished Orkin for unilaterally increasing fees years after bargaining process).

2 Google fails to contend with the “unfair” language in the CFA. It tries (Mot. at 8) to restrict  
3 “in connection with” to “the bargaining process” by arguing such a limitation is “implicit in what  
4 it means for a practice to be ‘deceptive’ in the first instance.” But an “unfair” practice need not be  
5 “deceptive” to fall within the purview of the CFA. Google fails to explain how its overly restrictive  
6 definition could be reconciled for “unfairness” claims. The State alleges both deceptive *and* unfair  
7 conduct. The “unfair” acts are not addressed by Google’s Motion.

8 **b. FTC cases.**

9 The Legislature also intended the CFA to work in tandem with the FTC Act and directed  
10 courts to use the FTC’s interpretation of the FTC Act as guidance. SSOF ¶ 82. The Council of  
11 State Governments, *Suggested State Legislation*, Volume XXVI, at A-71 (1967) at C-5; *see also*  
12 A.R.S. § 44-1522(C) (“[i]t is the intent of the legislature, in construing subsection A, that the  
13 courts may use as a guide interpretations given by the federal trade commission and the federal  
14 courts to 15 United States Code §§ 45, 52, and 55(a)(1)”). The FTC has brought cases for deceitful  
15 data collection practices, confirming that Google’s activities are well within the purview of the  
16 CFA. *See, e.g.*, SSOF ¶ 72 (Compl. ¶¶ 32–34, *FTC v. VIZIO, Inc.*, Case No. 2:17-cv-00758  
17 (D.N.J. Feb. 6, 2017) (alleging that sharing sensitive television viewing data without consent is  
18 unfair); SSOF ¶ 73 (Compl. ¶¶ 4–18, 35-36, *Lenovo*, FTC Docket No. C-4636 (Dec. 20, 2017)  
19 (alleging that pre-installation of software to deliver ads, without “adequate notice or informed  
20 consent,” is unfair). The FTC has also stepped in to stop abuse of location tracking by companies  
21 seeking to geotarget ads. *See* SSOF ¶ 74 (Compl. ¶¶ 22–38; 51–54, *United States v. inMobi Pte*  
22 *Ltd.*, No. 3:16-cv-3474 (N.D. Cal. June 22, 2016) (alleging defendant engaged in deceptive  
23 practices when it tracked users’ locations to serve geotargeted ads without adequate disclosures);  
24 *see generally* SSOF ¶ 75 (Compl. *Goldenshores Techs., LLC*, FTC Docket No. C-4446 (Mar. 31,  
25 2014) (alleging that an app engaged in unfair and deceptive practice by tracking user location and  
26 transferring information to advertisers, without adequate disclosures to users)).

27 **c. Australia decision.**

28 Earlier this year, an Australian court rejected the precise arguments Google advances here.

1 finding that Google’s deceptive LH and WAA disclosures satisfy a similar “in connection with”  
2 element. The Australian Competition and Consumer Commission (“ACCC”) sued Google for  
3 violating a number of consumer fraud statutes. *See* SSOF ¶ 76 (*ACCC v. Google LLC*, 2021 FCA  
4 367 (NSD 1760 of 2019)). Google contended that its representations could not be “in connection  
5 with the promotion or supply of goods or services” because its statements were only made to users  
6 “who had already purchased, and commenced to use their Pixel phones.” *ACCC*, ¶ 339. The  
7 Australian court rejected that argument, explaining “the words ‘in connection with’ are of wide  
8 import” and “do not imply a necessary temporal limitation that the representations occur before  
9 or at the time of supply of goods or services.” *Id.* ¶ 340. The court held Google’s conduct was “in  
10 connection with” the supply of the phones and the “services provided by and through those phones  
11 via the pre-installed software.” *See* SSOF ¶ 76 (for this and other international cases involving  
12 Google’s location harvesting practices).

#### 13 **4. Google’s case law is distinguishable.**

14 The State has alleged, with extensive evidence, that Google crafted deceptive and unfair  
15 practices and omissions before selling or advertising devices, services and other merchandise.  
16 The State further alleges that Google engages in on-going transactions with consumers, and that  
17 its deceptive and unfair conduct coincides with those transactions on an ongoing basis. Rather  
18 than contend with these facts, Google relies on cases that involve discrete transactions  
19 unconnected to any sale and that are otherwise distinguishable.

20 For example, Google cites *Rinehart*, where a consumer accused GEICO of violating the  
21 CFA by making two promises through a letter that was provided after the consumer chose to use  
22 GEICO’s repair services. *Rinehart v. Gov’t Emps. Ins. Co.*, No. CV-19-01888-PHX-DLR, 2019  
23 WL 6715190, at \*4 (D. Ariz. Dec. 10, 2019). The court held that the additional representations  
24 were unrelated to the consumer’s original agreements with GEICO, and they were not alleged to  
25 be connected to any other sale or advertising of merchandise. Similarly, Google relies on *Devore*,  
26 where a consumer brought a CFA claim based on the bank’s statements “in connection with efforts  
27 to modify the repayment schedule for an already existing debt.” *Devore v. Nationstar Mortg. LLC*,  
28 No. CV-14-08063-PCT-DLR, 2015 WL 12426151, at \*8 (D. Ariz. Mar. 11, 2015). The court

1 dismissed the claim because the statements did “not relate to the sale or advertisement of [a loan],  
2 but instead to modifying the payment schedule for [the loan] previously purchased.” *Id.* Even if  
3 the “loan structure services” could be considered merchandise, the plaintiff failed to plead any  
4 sales or advertising or those services. *Id.* Neither case is instructive here.

5 Unlike these cases, Google’s unfair and deceptive conduct predates, coincides with, and  
6 relates directly to the merchandise that Google sells and advertises. Even when Google’s  
7 deceptive collection of location data occurs after (and before) the sale of the phone, that deceptive  
8 practice relates to pre-sale representations—it was preordained when Google pre-programmed  
9 software to effectuate its deceptive scheme. Unlike *Rinehart* and the other cases Google cites,  
10 Google also deceptively induces consumers to remain in a relationship where the consumer  
11 continues to provide consideration—payments or something else of value to the seller, namely  
12 data. Google is thus involved in continuous and on-going sales with consumers.

13 As discussed above, cases like *19th Ave.* and others from around the country like *Miller*  
14 emphasize that there is no temporal limit on CFA claims brought by the AG. Tellingly, *all* of the  
15 cases Google cites by involve a *private* plaintiff, not claims asserted by the AG. The distinction  
16 is important. For a CFA claim brought by the AG, deceptive or unfair practices are actionable  
17 “whether or not any person has in fact been misled, deceived or damaged thereby.” A.R.S. § 44-  
18 1522(A); *see also Green Acres*, 127 Ariz. at 168 (“reliance or actual deception or damage is not  
19 a prerequisite to a consumer fraud action brought by the attorney general”). In contrast, when  
20 consumers assert an implied cause of action under the CFA, they must prove their own *reliance*.  
21 *Kuehn v. Stanley*, 208 Ariz. 124, 129 (Ct. App. 2004) (private plaintiff must prove “consequent  
22 and proximate injury resulting from the promise,” and such injury only “occurs when a consumer  
23 relies . . . on false or misrepresented information”). When courts consider “in connection with”  
24 language in a private CFA claim, they focus on the “reliance” aspect—which is inapposite here.

25 For example, although *Rinehart* (cited by Google) mentions the “in connection with”  
26 element, the court mostly focuses on reliance, explaining that GEICO’s statements were not ‘in  
27 connection with” the earlier transaction because the misrepresentations “could not have induced  
28 Plaintiffs.” *Rinehart*, 2019 WL 3715190 at \*4. Similarly, in *Sullivan* (also cited by Google), the

1 court expressly premised its ruling on “the purpose of the implied private cause of action,”  
2 explaining that, as subsequent purchase, the plaintiff “is not within the class of consumers  
3 intended to be protected by the implied private cause of action under the CFA.” *Sullivan v. Pulte*  
4 *Home Corp.*, 231 Ariz. 53, 61 ¶ 38 (Ct. App. 2012), *vacated in part, Sullivan v. Pulte Home Corp.*,  
5 232 Ariz. 344 (2013). Likewise, *Contreras* and *Devore* are also private right of action cases.

6 Ignoring the Iowa decision in *Miller* and similar cases, Google instead relies on Maryland  
7 case law, but those authorities do not advance Google’s positions. As an initial matter, *Luskin’s*,  
8 *Inc. v. Consumer Prot. Div.*, 726 A.2d 702, 713 (Md. 1999) does not deal with the “in connection  
9 with” element and, instead, holds that materiality is an element of affirmative consumer fraud. At  
10 best, *Luskin’s* just confirms that Maryland’s statute is different from Arizona’s CFA, as the “Act”  
11 Clause of the Arizona CFA does not have a materiality element. *See* RAJI (Civil) CTI 21 (7<sup>th</sup> ed.)  
12 (2020); *see also AutoZone*, 229 Ariz. at 361 ¶¶ 10–12 (distinguishing between the Act and  
13 Omission Clause). Google also cites two other private actions from Maryland—*Shreve v. Sears*,  
14 *Roebuck & Co.*, 166 F. Supp. 2d 378, 417, 420 (D. Md. 2001) and *Pucci v. Annapolis Sailyard*,  
15 *Inc.*, No. CIV. JKB-10-2968, 2011 WL 3793762, at \*1 (D. Md. Aug. 24, 2011)—both of which  
16 emphasize the “reliance” requirement that is not part of the AG’s burden here.

17 In the same vein, Google primarily cites cases that involve discrete transactions, but other  
18 courts have emphasized that a temporal limitation is particularly ill-suited for the “in connection  
19 with” element when the allegations concern a continuing set of sales or transactions. For example,  
20 in *Conway v. Citimortgage Inc.*, 438 S.W.3d 410, 412 (Mo. 2014), a mortgage company  
21 wrongfully foreclosed on a home, which prompted the homeowners to sue under Missouri’s CFA.  
22 *Id.* at 413. The mortgage company contended that its challenged conduct was outside the CFA  
23 because it occurred several years after the loan was bargained for and was post-sale activity. *Id.*  
24 The Missouri Supreme Court rejected that argument:

25 [a loan] creates a long-term relationship in which the borrower and the lender  
26 continue to perform various duties . . . over an extended period of time. Because  
27 each party must continue to perform these duties for the life of the loan, the sale  
continues throughout the time the parties perform their duties.

28 *Id.* at 415; *accord Zandford*, 535 U.S. at 814 (identifying a “fraudulent scheme” as occurring

1 during the “course of business”). The framework of pre- and post- sale is not particularly helpful  
2 in the context of on-going transactions as alleged here.

3 Google (Mot. at 15) also quotes a passage from Judge Posner’s decision in *Gavin v. AT &*  
4 *T Corp.*, 464 F.3d 634 (7th Cir. 2006), *as amended* (Sept. 11, 2006), which interprets “in  
5 connection with” from the Securities Litigation Uniform Standards Act (SLUSA). But *Gavin* does  
6 not support Google’s proposed bright-line rule either. On the contrary, *Gavin* proposes a test—  
7 “[i]f what happens is traceable to something that occurred before the sale,” it would still be “in  
8 connection with” the sale. *Id.* at 639. Applying Judge Posner’s test to the facts here, Google’s  
9 devices, apps and services do not unexpectedly start transmitting location data after consumers  
10 complete their transactions with Google. Rather, like the “defective engine block” described by  
11 Judge Posner, Google’s devices, apps and services are pre-programmed to transmit data  
12 deceptively. Extensive evidence confirms that Google’s conduct is “traceable” to the sales.

13 The Ninth Circuit construes the SLUSA more broadly, explaining that “in connection with”  
14 simply requires more than a tangential relationship. *See, e.g., Madden v. Cowen & Co.*, 576 F.3d  
15 957, 966 (9th Cir. 2009) (“a relationship in which the fraud and the stock sale coincide or are more  
16 than tangentially related.”) Under this standard as well, the evidence strongly supports a finding  
17 that Google’s deceptive conduct is “connected to” the sales alleged by the State.

18 Google’s proposed legal framework is incorrect. Under any of the tests articulated in the  
19 case law, the evidence supports a finding that Google’s deceptive conduct satisfies the “in  
20 connection with” element. Google’s deceptive practices are programmed into devices, software,  
21 apps and services for engaging with consumers. SSOF ¶¶ 32, 39. Google also provides descriptive  
22 disclosures (including its false LH help center page) which are available to consumers at the time  
23 of sale. SSOF ¶¶ 39, 43. Further, Google and its users are constantly engaging in sales—each day,  
24 thousands of times in Arizona, users engage with Google’s services, and Google (1) takes the data  
25 of users as consideration and (2) uses that data to profit by placing ads in front of those users.  
26 Through Google’s deceptive location tracking mechanism, every interaction becomes an  
27  
28

1 opportunity for Google to collect and exploit user location data.<sup>19</sup> SSOF ¶¶ 31–32.

2 **C. The evidence shows Google’s deceptive and unfair practices are “in connection**  
3 **with” the sale and/or advertisement of merchandise.**

4 Google’s deception of consumers extends far and wide—both at the beginning of its  
5 engagement with users (*i.e.*, marketing its apps, services, and devices) and when a user is engaging  
6 with Google’s services and products. Indeed, Google constructs this deceptive scheme before any  
7 interactions with consumers. Its omissions and representations are connected to at least three types  
8 of “sales” under the CFA: the continuous sale of apps and services, sale of devices, and continuous  
9 sale of transactions matching users and advertisers. Google’s deceptive and unfair acts are deeply  
10 intertwined with “sales” and advertising, and they are subject to the CFA.

11 **1. Google deceives users in connection with ongoing sales of services.**

12 Google’s deceptive and unfair acts and practices are interwoven into its transactions with  
13 consumers. Each time a user transacts with Google (*e.g.*, by viewing a map or using an app),  
14 Google takes more than what users understood they bargained for, just as in *AutoZone*, where the  
15 absence of clear pricing created a triable issue. *See* 229 Ariz. at 362 ¶¶ 14–15. Consumers are also  
16 induced to stay in the merchant-consumer relationship and engage in further data-for-services  
17 sales through these deceptive acts and practices. *See 19th Ave.*, 2016 WL 7368620, at \*4; *see also*  
18 *Sw. Sunsites*, 105 F.T.C. 7, \*113; *Miller*, 694 N.W.2d at 525–26; *Conway*, 438 S.W.3d at 412.

19 Extensive evidence shows that Google’s deception is connected to these sales. Google  
20 deceives users into handing over valuable consideration (location data) “in connection with” each  
21 “transaction” for services. *See* Section III(A)(1), *supra*. Even before they buy any service or  
22 device, Google leads users to believe it will only collect or exploit their location data in certain  
23 ways and that users can control this process. Those representations are untrue and, ultimately,  
24 choice over location tracking is an *illusion*. *See* Sections III(C)(1), (4). Similarly, users wishing  
25 to know the terms of their transaction with Google are directed to disclosures concerning WAA,  
26 LH and other settings that create a deceptive net impression and, in some cases, are downright

27 <sup>19</sup> For instance, when Google wanted to increase the use of LH, it [REDACTED]  
28 [REDACTED] SSOF ¶ 62. This change resulted in [REDACTED]  
[REDACTED] just by Google making one change to the way LH was presented. *Id.*

1 *false* in describing Google’s tracking of location data.<sup>20</sup> *See* Section III(C). The settings the user  
2 activates, including LH, WAA, and others, are in connection with the transaction of data for  
3 services. SSOF ¶¶ 37, 58. Likewise, when users download or interact with an app (both of which  
4 are “sales” under the CFA), Google represents that it will honor runtime settings—which is untrue.  
5 SSOF ¶¶ 67–70. When users provide Google with their location data in exchange for Google’s  
6 applications and services, they are deceived into believing they can control how Google takes this  
7 data.<sup>21</sup>

8 As explained, Google’s misconduct is part of a scheme it sets up to mislead consumers  
9 even before they interact with Google. This is not just “post-sale” conduct, and no bright-line rule  
10 excludes this conduct from the CFA. At a minimum, determining whether the conduct and  
11 omissions are sufficiently “connected” is an issue to be decided by the trier of fact. *See S.E.C. v.*  
12 *Radius Cap. Corp.*, No. 2:11-CV-116-FTM-29, 2013 WL 298209, at \*4 (M.D. Fla. Jan. 25, 2013)  
13 (denying defendants’ summary judgment motion on Rule 10b-5 claim based on genuine issues of  
14 material fact as to whether the misrepresentations were “in connection with” sale of security).

15 **2. Google deceives in connection with the sale and advertisement of devices.**

16 Consumers are told (through representations, omissions and the existence of settings) that  
17 when they purchase Google’s Pixel or Nexus phone or an Android device that they are acquiring  
18 a phone that they can control. They are mistaken. To use an Android device in any meaningful  
19 way, users must set up a Google account. *See* Section III(B)(2). As part of the set-up process, and  
20 in connection with the sale of the Android device, the user must either create or sign into his or  
21 her Google account. SSOF ¶ 37. As part of that process, Google also presents users a choice to  
22 toggle certain location settings on or off, like LH and WAA, and also cites to its privacy policy

23 <sup>20</sup> When the AP article exposed Google’s deception regarding LH and WAA settings, [REDACTED]  
24 [REDACTED] SSOF ¶ 77.

24 Google’s claim that the State alleges a “hodgepodge of post-transaction conduct” (Mot. at  
25 14:14, 15:10–17:23) is wrong. When Google infers a user’s location using an IP address, tricks  
26 them into providing location through a deceptive setting or toggle, takes their location through an  
27 app when that app’s permission is denied, or continues to use their location data when Ads  
28 Personalization is turned off and the user requests deletion of their data, each of these deceptive  
devices are used in connection with Google providing its “free” services. *See* SSOF ¶¶ 78–81.  
Users exchange some data for Google’s services, and Google takes their data in connection with  
their use of the service. Each time this occurs is a sale/transaction, with Google taking more data  
than users understand.

1 and other disclosures. *See* Part III(B)(2). These disclosures made during the setup process are  
2 made in connection with the sale of the device. *See Dunlap*, 136 Ariz. at 342 (holding that  
3 representations made before and after delivery of a vehicle were made in connection with the  
4 sale); *Sands*, 2014 WL 1118149, at \*4 ¶ 17. The affirmative representations made on the LH page,  
5 the non-disclosure of WAA’s ability to track location, and the existence of the Off Means Coarse  
6 policy are thus all actionable under the CFA, as they represent acts, practices (as defined by  
7 *Autozone*, 229 Ariz. at 361–62 ¶ 14), and omissions that are related to the device’s sale. *See*  
8 *generally* Section III(C). At the very minimum, these issues present a fact question for the  
9 factfinder.

10 In the ACCC litigation, the Australian court (at ¶ 101 of its Order (Ex. 115)) concluded  
11 that Google’s representations, if made, were “‘in connection with’ the supply or promotion of the  
12 Android OS, the Pixel phone and various Google services.” “Google represented that the Android  
13 OS had ‘performance characteristics’ which it did not have including that the Location History  
14 setting controlled whether Google would obtain personal data about a user’s location and that if  
15 the setting was ‘off’ Google would not obtain personal data about a user’s location from a linked  
16 device or use that data. Equivalent particulars were provided with respect to ‘uses’ and ‘benefits’  
17 of the Android OS.” *Id.* A reasonable trier of fact could reach same conclusion here.

18 **3. Google’s conduct is in connection with its sale of ad placements.**

19 As shown in Section III(B)(3), Google’s business model of connecting users and  
20 advertisers represents one “transaction.” *Ohio*, 138 S. Ct. at 2286 & n.8 (two-sided platforms are  
21 “best understood as ‘supplying *only one product*’— *the transaction*” which is “*jointly consumed*”  
22 by the supplier’s customers on both sides of its “two-sided transaction”) (emphasis added). This  
23 also involves sales, but also “advertisements” under the CFA, and Google does not qualify under  
24 the “exemptions” in § 44-1523. *See* Section IV(A)(3). And the CFA covers the “use” of the  
25 unlawful conduct. *Powers*, 229 Ariz. at 561 ¶ 19.

26 Extensive evidence—including Google’s internal documents, testimony from its Chief  
27 Economist and expert opinions submitted by the State—show that Google’s unfair and deceptive  
28 conduct and omissions are related to these on-going sales and advertising. *See* Section III(B)(3),

1 *supra*. Google’s challenged acts and practices aren’t just “in connection with” these transactions—  
2 they are a *necessary* component for them to occur in the first place. And it uses that information  
3 to engage with advertisers, promising advertisers it can put their ads in front of audiences the  
4 advertiser has geo-targeted (or which Google has geo-targeted for them). Google then returns to  
5 those tracked users (and even users who think they are untracked) and serves the ads, feeding  
6 Google’s revenue model. This process represents a single congruent sale that the user is party to—  
7 the sale to the advertiser would not exist but for the taking of the location data, *i.e.*, Google’s  
8 collection of location data is in connection with its sale of its advertising services.<sup>22</sup>

9       Based on its internal documents, Google understands the goods and services it provides are  
10 predicated on this exchange—which is why ██████ of its ads have location targeting enabled.  
11 *See* Section III(A)(1). As part of its value proposition to advertisers, Google touts its ability to  
12 geotarget and invites them to take advantage of the location data it has harvested from users. *See*  
13 Section III(A)(1). If Google’s Motion is granted, then Arizona consumers will be the only party  
14 left in the dark from this transaction, signaling to digital giants that the broad remedial protections  
15 of the CFA don’t apply to them and that Arizonans do not need to be dealt with fairly.

## 16 **V. CONCLUSION**

17       What Google’s Motion ignores is that Google is in the advertising business and that  
18 advertising produces the vast majority of the billions of dollars it makes every year. Google  
19 deceives users to give up location data that Google collects and then monetizes by selling direct  
20 advertising to the consumers whose data Google has taken. Google’s deceptive acquisition of  
21 personal data to sell advertisements is an exchange for consideration. The Court must not establish  
22 a new bright-line exception, divorced from the CFA’s text, that would ignore the modern reality  
23 of the world today and how Google uses data it has deceptively obtained from consumers to get  
24 advertisers to sell directly to these same consumers.

---

26 <sup>22</sup> As discussed at n.21, Google’s post-sale arguments fail for this reason as well. When a user is  
27 deceived by Google’s many deceptive technologies discussed in Google’s Motion (at 15:10–  
28 17:23), Google uses this data to serve ads on that user when they use Google’s services. As this  
all occurs in a single transaction, Google’s deceptive collection of location is necessarily in  
connection with Google’s sale of advertising services.

1 RESPECTFULLY SUBMITTED this 16th day of November, 2021.
